What if my NEUPRO Patch falls off?

Exercise and Activity

Left SUPPORT

Medical advice. Always seek the advice of your healthcare provider about your condition or your treatment.

Use provided with your NEUPRO prescription or on NEUPROPD.com.

• Choose the time of day or night that works best for you to apply your NEUPRO Patch. Apply your NEUPRO Patch at the same time each day.
• Wear your NEUPRO Patch for 24 hours.
• After 24 hours, remove your NEUPRO Patch and apply a new one right away to a different area of your skin.

Wear your NEUPRO Patch for 24 hours.

Everyday Choices for Better Health

Beyond the Patch

What else, besides taking medicines, could I be doing to manage my well-being?

During the First Week: Beyond the Patch

Exercise and Activity

Although there’s no “Parkinson’s diet,” eating nutritionally balanced meals, including plenty of fresh fruits and vegetables, can contribute to your general health.

You may want to limit or avoid...

Other benefits of exercise for people with Parkinson’s may include:

Hand Pressure + 30 Seconds

What else, besides taking medicines, could I be doing to manage my well-being?

• Improving digestion
• Improving balance (potentially reducing falls)
• Improving posture (particularly for the chin)
• Improving muscle strength

Physician has told me I can think of my body as a clock. I should change the patch site clockwise.

Before applying the patch, please read the Patient Information and Instructions for Use provided with your NEUPRO prescription or on NEUPROPD.com.

When to apply NEUPRO:

SESSION 1

SESSION 1

Get nurse support at 1-844-599-CARE (2273)

Guide to Getting Started

From the upper body to the lower body. Your NEUPRO Patch should not be applied to the same area of your skin more than 1 time every 14 days. Apply NEUPRO to a different area of skin each day to reduce the chance of getting skin irritation.

• Apply your NEUPRO Patch to a different place on your skin each day. Because NEUPRO is delivered through the skin, food should not affect the medication.

Choose an area of clean, dry, and healthy skin on the stomach, thigh, hip, side of the body between the ribs and from the upper body to the lower body. Your NEUPRO Patch should be rubed by tight clothing or under a waistband.

• Avoid applying creams, lotions, ointments, oils, and powders to the skin area where your NEUPRO Patch will be placed.

• Avoid applying your NEUPRO Patch to areas where it could be rubbed by tight clothing or under a waistband.

• Avoid applying your NEUPRO Patch to skin folds.

• Do not apply your NEUPRO Patch to skin that is not, inflated, or injured.

• Apply your NEUPRO Patch to a different area of skin each day to reduce the chance of getting skin irritation.

• If you need to apply your NEUPRO Patch to a hairfy area, the area should be shaved at least 3 days before applying the patch.

When to apply NEUPRO:

• NEUPRO should be applied right away after removing it from the protective pouch. Do not damage or cut your NEUPRO Patch into smaller pieces.

What if my NEUPRO Patch falls off?
NEUPRO is a prescription medicine used to treat Parkinson’s disease.

Important Safety Information

NEUPRO contains a sulfite called sodium metabisulfite. Sulfites can cause severe allergic reactions that are life threatening to some people who are sensitive to sulfites. People with asthma are more sensitive to sulfites.

Get the Support You Need

If you have any of these problems, talk to your doctor.

Indication

60,000 Americans are diagnosed with Parkinson’s disease each year.

What is PD?

The disease is sometimes called idiopathic Parkinson’s, because the exact cause is not known. However, many Parkinson’s symptoms are believed to result from a lack of dopamine, one of the brain’s chemical messengers. Without enough dopamine, the neurons (nerve cells in the brain) that control movement can’t function properly. This makes it difficult for people with Parkinson’s to move normally. Symptoms may vary from person to person.

What to Watch for While on NEUPRO

You should pay particular attention to any skin reaction that:

- Lasts more than a few days
- Becomes worse
- Appears on body areas other than the patch site
- Is red, irritated, or injured
- Spreads beyond the area where the patch was applied

GEUPO can cause serious side effects. Please see the Important Safety Information above.

The most common side effects of NEUPRO for Parkinson’s disease are:

- Nausea
- Vomiting
- Sleepiness
- Application site reactions
- Dizziness
- Loss of appetite
- Difficulty falling asleep and staying asleep
- Increased sweating
- Vision problems

NEUPRO can cause decreases in blood pressure, especially when you start or increase your dose. Increases in blood pressure and heart rate, fainting, weight gain, and fluid retention also can occur. If you feel faint or start to lose balance, call your doctor right away and tell your doctor.

NEUPRO may not be right for you.

The most common side effects in people taking NEUPRO for Parkinson’s disease are nausea, vomiting, sleepiness, application site reactions, dizziness, loss of appetite, difficulty falling asleep and staying asleep, increased sweating, vision problems, leg swelling, and uncontrolled, sudden movements of the arms or legs.

NEUPRO is a prescription medicine used to treat Parkinson’s disease.

Finding the Right Dose for You

The NEUPRO Patch offers once-daily delivery of medication.

NEUPO provides stable, continuous delivery 24 hours a day, so you get a consistent level of medication throughout the day.

How Does NEUPRO Work?

The NEUPRO Patch is the first and only Parkinson’s “patch” you wear on your skin. The NEUPRO Patch delivers the dopamine agonist rotigotine through a small patch that sticks to your skin. It is believed that dopamine agonists work by stimulating dopamine receptors in the brain; however, the exact way NEUPRO treats PD is unknown.

ucbCARES is dedicated to finding a cure for PD and helping the lives of patients and their caregivers through ucbCARES.

The ucbCARES team is reminded daily of the struggles and challenges individuals living with Parkinson’s disease face. We are driven by a desire to focus on the whole patient and identify solutions that allow us to provide an exceptional caring experience.
