You’re determined to fight the symptoms of Parkinson’s disease.

Your partner, the 24-hour NEUPRO Patch, can help.

It’s ON

morning walks

Your guide to getting started on NEUPRO® (rotigotine transdermal system).

Sign up for the Patch Partnership Program™! Details inside.

www.NEUPROPD.com
What does It’s ON mean to me?

It’s ON because the NEUPRO Patch delivers 24 hours of continuous medicine. In clinical trials, early-stage PD patients taking NEUPRO saw improvement in their Parkinson’s symptoms, measured by a combination of motor function and activities of daily living.

- Motor function can include tremors, stiffness, slowness, and problems with balance.
- Activities of daily living can include eating, dressing, and walking.

The most common side effects of NEUPRO for Parkinson’s disease are application site reactions, nausea, vomiting, sleepiness, dizziness, loss of appetite, increased sweating, difficulty sleeping, leg swelling, and uncontrolled, sudden movements of arms or legs.

Just as you’re determined to face the challenges before you, now you have a once-daily partner to help you manage your symptoms. That’s why It’s ON with the NEUPRO Patch.

In addition, there is support available through the Patch Partnership Program™, and you may be able to get savings on your NEUPRO prescriptions.* Sign up online at www.NEUPROPD.com.

*Eligibility restrictions, terms, and conditions apply.

IMPORTANT SAFETY INFORMATION

NEUPRO contains a sulfite called sodium metabisulfite. Sulfites can cause severe allergic reactions that are life threatening to some people who are sensitive to sulfites. People with asthma are more sensitive to sulfites. Remove the patch right away and call your doctor if you have swelling of the lips or tongue, chest pain, or trouble breathing or swallowing.

NEUPRO may make you fall asleep suddenly or without warning while doing normal activities, such as driving, which may result in accidents. Tell your doctor right away if this happens. Drinking alcohol or taking other medicines that cause drowsiness may increase your chances of becoming sleepy while using NEUPRO. Do not drive, use hazardous machinery, or do other dangerous activities until you know how NEUPRO affects you.

Please see the Important Safety Information on the last page of this brochure and enclosed Prescribing Information in the back pocket.
WHAT is NEUPRO?

NEUPRO® (rotigotine transdermal system) is a prescription medicine used to treat Parkinson’s disease [PD]. NEUPRO is effective in helping to improve movement and function in people with PD.

NEUPRO is a patch that delivers the dopamine agonist rotigotine through the skin, directly into the bloodstream. It releases the medicine 24 hours a day, providing stable, continuous delivery of medication.

WHY NEUPRO may be right for you.

NEUPRO may be the first medication that your doctor has prescribed for you. Or your doctor may be making a change because you’ve reached a point where your symptom control isn’t what it used to be. Or you may feel your medication isn’t helping enough. This is when an honest conversation with your doctor becomes so important to decide if the NEUPRO Patch is right for you.

With NEUPRO, It’s ON in so many ways, because:

- **Early-stage PD** patients taking NEUPRO saw significant improvement in PD symptoms through a combined measure of:
  - Motor functions, such as tremors, stiffness, slowness, and problems with balance
  - Activities of daily living, including eating, dressing, and walking
- **Advanced-stage PD** patients taking NEUPRO in addition to their existing medication had almost 2 hours less “off” time—and nearly 2.5 hours more “on” time—than patients taking a placebo
  - More than twice as many PD patients taking NEUPRO woke up “on” before taking morning medication, compared to those taking placebo
  - It releases the medicine 24 hours a day, providing stable, continuous delivery of medication

Do not use NEUPRO if you are allergic to rotigotine or any other ingredients in the patch.

IMPORTANT SAFETY INFORMATION

NEUPRO can cause or worsen psychotic symptoms including hallucinations (seeing or hearing things that are not real), confusion, excessive suspicion, aggressive behavior, agitation, delusional beliefs (believing things that are not real), and disorganized thinking. The chances of having hallucinations or these other psychotic-like changes are higher in people with Parkinson’s disease who are elderly, taking NEUPRO, or taking higher doses of NEUPRO. If you have any of these problems, talk to your doctor.

NEUPRO can cause decreases in blood pressure, especially when you start or increase your dose. Increases in blood pressure and heart rate, fainting, weight gain, and fluid retention also can occur. If you faint or feel dizzy, nauseated, or sweaty when you stand up from sitting or lying down, or have an unusually fast increase in weight, swelling, or fluid retention, especially in the ankles or legs, tell your doctor.

Please see the Important Safety Information on the last page of this brochure and enclosed Prescribing Information in the back pocket.
WHY a patch may be right for you.

- NEUPRO® (rotigotine transdermal system) releases the medicine 24 hours a day, providing stable, continuous delivery of medication.
- The NEUPRO Patch offers once-daily dosing. Simply choose the time of day that works best for you and apply the patch at the same time each day.
- The medication in the NEUPRO Patch doesn’t go through your digestive system.
  - Food won’t interfere with how it works.
  - There are no pills to swallow.
  - There’s no need to schedule NEUPRO around meals.

NEUPRO can cause nausea, dizziness, or sweating, which may occur more frequently when you first start using the patch.

Skin reactions may occur at the site where you apply NEUPRO. Tell your doctor if you get a rash, redness, swelling, or itching that will not go away.

IMPORTANT SAFETY INFORMATION

Some patients using NEUPRO get urges to behave in a way that is unusual for them, such as unusual urges to gamble, strong urges to spend money, binge eating, or increased sexual urges and behaviors. If you or your family notices you are developing any unusual behaviors, talk to your doctor.

NEUPRO may cause uncontrolled, sudden movements or make such movements you already have worse or more frequent if you have Parkinson’s disease, which may mean that your anti-Parkinson’s medicine needs to be changed.
It’s ON with the Patch Partnership Program™.

We understand that starting a new treatment can be overwhelming, and that living with Parkinson’s disease involves more than just managing symptoms. Our Patch Partnership Program was designed to help you get off to a good start and get the most out of treatment with the NEUPRO® (rotigotine transdermal system) Patch. Sign up today to receive:

- Your FREE Welcome Kit that includes information, tools, and resources, including:
  - Tips to help you talk to your doctor
  - Tools to help track your symptoms
  - Information on living with Parkinson’s disease
  - Resources and information to help you start the NEUPRO Patch
  - Relevant emails with education, tips, and tools to help support you on your treatment journey

The NEUPRO Patient Savings Card

As part of the Patch Partnership Program you may also be eligible to get NEUPRO for as low as $10 per month for the next 12 months.*

*Eligibility restrictions, terms, and conditions apply.

Sign up for the Patch Partnership Program today!
Visit www.NEUPROPD.com

If you would like someone to contact you to answer any further questions about NEUPRO, we encourage you to complete the form in the back of this brochure. By doing so, you authorize a UCBCares Associate (nurses and pharmacists) to contact you in regards to starting NEUPRO or to answer questions about the Patient Information Brochure, Welcome Kit, or other information you may receive related to NEUPRO. Please see the sign up form in the back of this brochure.

IMPORTANT SAFETY INFORMATION

Skin reactions may occur at the site where you apply NEUPRO. Tell your doctor if you get a rash, redness, swelling, or itching that will not go away. Some people with Parkinson’s disease may have an increased chance of getting a skin cancer called melanoma. You should have your skin checked by a doctor regularly.

SPECIAL offers to help start treatment.

Receive a 30-day trial supply of NEUPRO® (rotigotine transdermal system)
• See inside the back pocket of this brochure for your FREE 30-day trial offer of NEUPRO
• No purchase is required to receive your free trial
• Limited to one free trial per patient 18 years of age or older

This offer is not to be used in combination with the NEUPRO Patient Savings Program™. UCB reserves the right to change or cancel this program at any time without notice.

IMPORTANT SAFETY INFORMATION
Avoid exposing the NEUPRO patch you are wearing to heating pads, electric blankets, heat lamps, saunas, hot tubs, heated water beds, and direct sunlight. Too much medicine could be absorbed into your body. Also, do not wear NEUPRO during medical procedures called magnetic resonance imaging (MRI) or cardioversion because this could cause skin burns.

STARTING treatment off right.

Visit PatchPartnershipPD.com and register for the Patch Partnership Program™, which was designed to help you get started on treatment with NEUPRO. You will receive a welcome kit and a series of emails that offer information about living with Parkinson’s disease, treatment with NEUPRO, useful tools to help you talk to your doctor, and information about the NEUPRO Patient Savings Card.

Here’s what to do before you start treatment.
• Visit NEUPRO.com to watch the “How to Apply the Patch” video
• Practice how to apply NEUPRO using the placebo patch attached below
• Please note the practice patch does not contain any medicine

Use this placebo patch to become familiar with how to correctly apply NEUPRO.

Follow the NEUPRO (rotigotine transdermal system) Product Use Brochure contained in the back pocket of this brochure. Also, read the Patient Information and Instructions for Use inside your NEUPRO sample or prescription box for complete instructions on the right way to use NEUPRO.

Remove and discard the practice placebo patch before you apply the first NEUPRO Patch from your prescription box. The NEUPRO Patch should not be applied to the same application site as the practice placebo patch.

Please see the Important Safety Information on the last page of this brochure and enclosed Prescribing Information in the back pocket.

IMPORTANT SAFETY INFORMATION

NEUPRO contains a sulfite called sodium metabisulfite. Sulfites can cause severe allergic reactions that are life threatening to some people who are sensitive to sulfites. People with asthma are more sensitive to sulfites. Remove the patch right away and call your doctor if you have swelling of the lips or tongue, chest pain, or trouble breathing or swallowing.

NEUPRO may make you fall asleep suddenly or without warning while doing normal activities, such as driving, which may result in accidents. Tell your doctor right away if this happens. Drinking alcohol or taking other medicines that cause drowsiness may increase your chances of becoming sleepy while using NEUPRO. Do not drive, use hazardous machinery, or do other dangerous activities until you know how NEUPRO affects you.

NEUPRO can cause or worsen psychotic symptoms including hallucinations (seeing or hearing things that are not real), confusion, excessive suspicion, aggressive behavior, agitation, delusional beliefs (believing things that are not real), and disorganized thinking. The chances of having hallucinations or these other psychotic-like changes are higher in people with Parkinson’s disease who are elderly, taking NEUPRO, or taking higher doses of NEUPRO. If you have any of these problems, talk to your doctor.

NEUPRO can cause decreases in blood pressure, especially when you start or increase your dose. Increases in blood pressure and heart rate, fainting, weight gain, and fluid retention also can occur. If you faint or feel dizzy, nauseated, or sweaty when you stand up from sitting or lying down, or have an unusually fast increase in weight, swelling, or fluid retention, especially in the ankles or legs, tell your doctor.

Some patients using NEUPRO get urges to behave in a way that is unusual for them, such as unusual urges to gamble, strong urges to spend money, binge eating, or increased sexual urges and behaviors. If you or your family notices you are developing any unusual behaviors, talk to your doctor.

NEUPRO may cause uncontrolled, sudden movements or make such movements you already have worse or more frequent if you have Parkinson’s disease, which may mean that your anti-Parkinson's medicine needs to be changed.

Skin reactions may occur at the site where you apply NEUPRO. Tell your doctor if you get a rash, redness, swelling, or itching that will not go away. Some people with Parkinson’s disease may have an increased chance of getting a skin cancer called melanoma. You should have your skin checked by a doctor regularly.

Avoid exposing the NEUPRO patch you are wearing to heating pads, electric blankets, heat lamps, saunas, hot tubs, heated water beds, and direct sunlight. Too much medicine could be absorbed into your body. Also, do not wear NEUPRO during medical procedures called magnetic resonance imaging (MRI) or cardioversion because this could cause skin burns.

Tell your doctor if you have breathing problems, a sleep disorder, mental problems, high or low blood pressure, or heart problems; are pregnant or plan to become pregnant; or are breastfeeding or plan to breastfeed. NEUPRO may not be right for you.

The most common side effects in people taking NEUPRO for Parkinson’s disease are nausea, vomiting, sleepiness, application site reactions, dizziness, loss of appetite, difficulty falling asleep and staying asleep, increased sweating, vision problems, leg swelling, and uncontrolled, sudden movements of the arms or legs.
